

VIP Hi-Line Lipo™

The 6-in-1 Evolution in Aesthetic & Functional Medicine.

VIP
ITALIA

Setting a New Standard in Aesthetic & Functional Patient Care.

The **VIP Hi-Line Lipo™** embodies a 6-in-1 evolution in aesthetic and functional medicine, delivering a highly customizable treatment approach through a single, integrated platform.

It supports a wide range of clinical applications, including facial and body remodeling, tissue rejuvenation, and metabolic activation, helping promote long-term physiological balance and overall well-being.

Why professionals choose VIP Hi-Line Lipo™?

Global Excellence for GPL-1

CMA global accreditation for use as an adjunctive therapy to GLP-1-based treatment protocols.

100+ Protocols

100+ fully customizable treatment protocols to effectively meet the diverse needs of your clients.

6-in-1 Technologies

The machine integrates **six core technologies** into a single powerful machine, each designed for specific treatment.

100% Holistic Solution

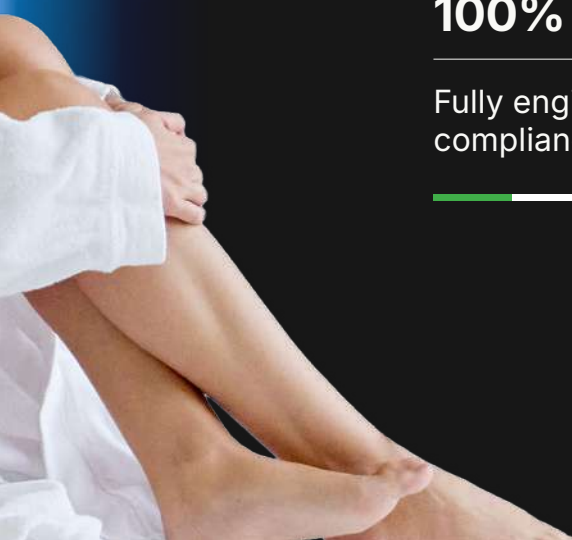

Delivers physiological action across five different layers while preserving tissue integrity.

55 Years of Expertise

Backed by 55+ years of the industry expertise & continuous innovations.

100% Made in Italy

Fully engineered & produced in Italy in strict compliance with the European safety regulations.

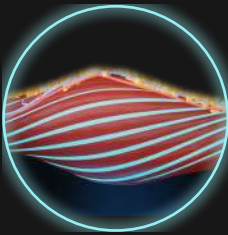

Six synergistic technologies unified within a single high-performance system:

1. Ultrasound Cavitation

The Lipoline provides an advanced, non-invasive approach to body contouring, supporting adipose tissue function while visibly improving the appearance of cellulite and overall skin texture, offering a refined alternative to surgical liposuction.

2. Electrical muscle stimulation

The Transion induces powerful isotonic & torsion muscle contractions to support the reduction of localised adipose tissue, enhance muscle tone, promote lymphatic drainage and metabolic activity, contributing to overall vitality.

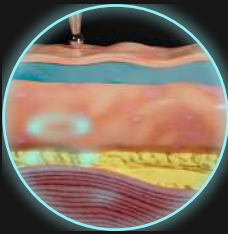

3. NMES

The Isogei delivers neuromuscular stimulation engineered to induce high-intensity muscle contractions, facilitating maximal muscle fiber recruitment. It supports enhanced muscle tone, tissue lifting, and improvement in overall skin appearance.

4. Electro-Lymphatic Therapy

The Linfogeil lymphatic & venous drainage therapy is designed to restore healthy lymphatic function and venous circulation, and assist in the management of edema & fluid retention, producing a deeply restorative & calming neurosedative effect.

5. Modulated Microcurrent & DMA

The Microgei combines Modulated Microcurrent therapy with Dynamic Muscle Activation (DMA) to restore facial tissues vitality and support long-term aesthetic rejuvenation, accelerating production of collagen, elastin & hyaluronic acid.

6. TENS Therapy

The Carezza is designed to support optimal muscle function and deep neuromuscular relaxation, contributing to improved muscular balance, tension reduction, and improvement in the appearance of expression lines.

A versatile solution tailored to patients of all ages, skin types and treatment goals, addressing the most in-demand aesthetic treatments:

Lifting & Sculpting Effect

Skin Tone & Elasticity

Wrinkle reduction

Deep skin hydration

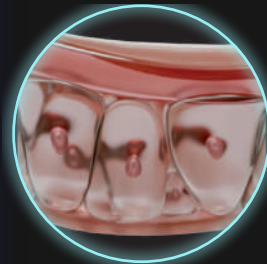

Detox & Microcirculation

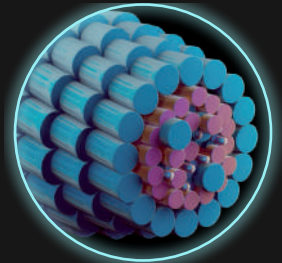

Delivering personalised treatment protocols designed to act across **five distinct tissue layers** to support full-body vitality.

These protocols aim to promote neuromuscular activation, enhance local metabolic activity, support circulatory function, improve tissue trophism, and facilitate lymphatic flow for sustained functional longevity.
